

CSCI 577 Personnel and Team Database.

Clients: Gustavo Perez and Kiran Chamarty
(chamarty@usc.edu)

Personnel and Team data is data that has not been generated as deliverables out of a CSCI 577 project relating to the teams and people associated with CSCI 577. This data includes effort data, student background information, grades, client evaluations and individual critiques. In addition to project and course information for CSCI 577, such data can be used by researchers for analysis and research. This project involves building a database GUI with security for Effort Data, Student Background Data, Grade Data, Client Evaluations, Individual Critiques, and other project and course information for CSCI 577. Desired features of the proposed system include a normalized structure, packaging for storage on Hyperwave, and support for multiple non-homogenous sources per semester for files. Much of the framework for this project has been set up by Kiran who will assist with the development in CSCI 577a.
