Background:

CST has developed a number of conference sites in Zope. We able to copy these sites and create new sites from the old copies. We still do allot of low level hands on changes.

Problem Statement:

We would like to productize our Zope conference information systems into an application that can be used to deploy many sites quickly.

Constraints:

Implement in Zope

Objective:

One or more Zope objects that generate a generic conference site. Generated conference site has an end user interface to customize site without having to know HTML, databases or Zope.
