

USC MSCS-SE Database. Client: TBD

Prospective students who are interested in earning a Master of Science degree in computer Science with a Specialization in Software Engineering at USC make online application requests via the CSE website at <http://sunset.usc.edu/degrees/apprequest.html>. Unfortunately, the program that processes these requests is not working, and the original source cannot be found to correct the problem. There is a need for a program to process such requests replacing the implied functionality, and to organize into some kind of database to track those who enter the specialization and those who complete the specialization, along with information about those who have worked for or assisted the Center for Software Engineering. This will allow the students in such a specialization to be better served by the CSE.
