

**Assignment #2 – IV&V for Core Capability Drive-thru  
Contact – Apurva Jain**

**Part I (2 Points) – Due Monday, March 10, 2003**

---

Step 1 -- Read your teams' test plan (thoroughly), especially section 2, Environment Preparation.

Step 2 – Inform your team that you plan to test the to-be-released-for-CCD 4 days (earlier on mutual agreement) prior to their CCD so that you have all the essentials you would need for testing.

Step 3 -- Consult with your team if any extra measures need to be taken for a CCD Release. If yes, make a note of it.

Step 4 – In less than 10 sentences report your progress (this can be done via email to me).

**Part II (28 Points) – Due 7 days before your teams' CCD**

---

Prepare a test plan (with test cases) to test your team's to-be-released-for-CCD system. In other words, write sections 2 (Environment Preparation) and 3 (Test Identification) from the Test Plan and section 4 from the "Test Description and Results" both provided in MBASE Guidelines.

If your team has a well-documented test plan, writing section 2 is trivial however the intent is to make sure you (and the project client in future) understand it too.

The challenge is in writing section 3 from test plan and section 4 from test description and results for which I expect your plan & test cases to be radically different from your teams' (not to an extent that you overdo it or deviate from the real motive).

**Part III (30 Points) – Due 2 days before your teams' CCD**

---

Test the system and furnish your results.

In other words, update section 2 & 3 from test plan (if there were any changes) and section 4 from test description and results (with the results and if there were any changes to the test cases).
