

CS 612 - Software Architectures

Homework Assignment 1

Define the following terms:

- Software component
- Software connector
- Software system
- Software architecture
- Architectural model
- Architectural style
- Application domain
- Middleware

Each definition may be as short as a single sentence or as long as a paragraph. Note that your definitions need not be “correct,” since these concepts have not yet been covered in class. However, you do need to justify your definitions as appropriate.
